

## Information Security Evaluation

[www.fewclix.com](http://www.fewclix.com)

The table below presents an evaluation of the key threats that could pose potential Information Security Risks for **FewClix for Outlook**:

Category	Information Security Risk	Does FewClix address the risk?
<b>Authentication</b>	Unauthenticated users accessing email data from a user's Outlook Store	Since FewClix is a Microsoft Outlook Add-in, users can access email data in the Outlook Store using FewClix, only if they are authenticated by Outlook or Group Policy via their user credentials. Hence, FewClix does not expose email data to unauthenticated users.
<b>Authorization (Role based access)</b>	Unauthorized access to email data in a user's Outlook Store	Since FewClix is a Microsoft Outlook Add-in, users can only access email data they are authorized to access by Outlook or Group Policy. Hence, FewClix does not expose email data to unauthorized users.
<b>Data Integrity</b>	Modification of users' email data in the Outlook store	FewClix is a non-intrusive Outlook Add-in that does not modify email data. It performs "Read Only" operations to: (1) Create / update an index (stored in the local machine) of email messages (2) Read index data and construct queries (3) Submit queries to Outlook to display email results
<b>Data Confidentiality</b>	Exposure of email data to additional confidentiality risks	Since FewClix allows only authenticated and authorized users to read email data, it does not expose email data to additional confidentiality risks.

<p><b>Network Activity</b></p>	<p>External server access or network event triggers</p>	<p>On installation / activation, FewClix collects the following information, which is stored in a secure dedicated VPS:</p> <ul style="list-style-type: none"> <li>a) Date &amp; time of install</li> <li>b) Email address</li> <li>c) OS and version</li> <li>d) Outlook version</li> <li>e) Java version</li> <li>f) Hashed MAC id</li> <li>g) Display resolution</li> </ul> <p>During installation of an update, FewClix collects:</p> <ul style="list-style-type: none"> <li>a) Date &amp; time of update</li> <li>b) Email address</li> <li>c) Version of FewClix installed</li> </ul> <p>During FewClix usage, FewClix logs the following activity information to provide users with measurable information about their FewClix usage:</p> <ul style="list-style-type: none"> <li>a) Date and time of search</li> <li>b) Type of item searched (Mail, Calendar or Contacts)</li> <li>c) Type of search parameters used (for example - Sender, Subject, Date, Attachments, etc.)</li> <li>d) Time taken (seconds) for FewClix to display search results, which is benchmarked against the time that Outlook's native search would have taken to display the same results.</li> </ul> <p>FewClix DOES NOT log any private or confidential information including Folder Names, Email Addresses, Email Content, etc.</p>
<p><b>Exception Management</b></p>	<p>Exception handling while working with email data</p>	<p>FewClix logs all exceptions in a log file in the user's local machine, which can be accessed and reviewed by an Administrator.</p>
