* .NET Framework 4.0 - http://www.microsoft.com/en-in/download/details.aspx?id=17718

2. What's New in FewClix (for Outlook) 6.5?

- **NEW Feature – Automatic REMINDERS for follow-up on "SENT Items"**
  - o One of the most difficult things to do with email is to follow-up on emails you send
  - o This requires significant manual effort and many sent emails that are not followed-up on, fall through the cracks
  - o Starting with **FewClix 6.5**, whenever you send an email, FewClix will ask if you would like to follow-up on it. If yes, it will automatically add this email to "My Actions" and will set-up a reminder on your calendar!
- **"Add To Insights" options now available for "SENT Items"**
  Also starting with **FewClix 6.5**, you can "right-click" on any SENT Item and add it to My Actions, Supervisors, Key Stakeholders and Team Members
- **Support for user-based deployment**
  All FewClix configuration settings and index files are created based on the logged in user
- **Faster and more accurate results**
  FewClix 6.5 features indexing changes that enhance performance and accuracy
